EXAMINER'S AMENDMENT

1. Claims 1 and 42-56 are allowed.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
3. The application has been amended as follows:
Please replace the abstract with the following abstract:
Apparatus (preferably portable) enabling a felled tree stem or log to have its stiffness characterized. The analysis is performed with best fit recognition procedure or one that emphasizes high harmonics to determine a fundamental frequency related to acoustic speed, which is indicative the stiffness characteristics of the tree stem or log. The apparatus uses a compliantly mounted accelerometer pressed against one end of the tree stem to detect reflections from the other end after impacting the first end. Also disclosed is a method of cutting a stem into logs by establishing a function that represents the nature of speed variation with distance along the stem characteristic for a species and locality. The average speed along a stem and the speed function are used to compute the likely speed at points along the stem, and then the stems are routed for cutting according to their speed.
4. In the response filed 9 December 2003, Applicant argued the following with regards to the rejections of the claims over Andrews et al.:

"In response to the rejections in view of Andrews et al (WO 00/36413) in paragraphs 13 and 14 of the Office Action, this reference is not prior art. Andrews has a publication date of June 22, 2000, which is after the filing date of two of the New Zealand applications (July 30, 1999 and August 10, 1999) from which priority is claimed. The third priority application is a combination of the first two priority applications."

Applicant's arguments are correct with regards to claims 1-7, 9-28, 30-31, and 33-38 as being rejected under 35 U.S.C. 102(a) and 35 U.S.C. 102(g). The rejections of these claims have been withdrawn in view of Applicant's arguments.

However, the above argument is not what resulted in the withdrawal of the rejection of the above claims as being rejected under 35 U.S.C. 102(f). A rejection applied under 35 U.S.C. 102(f) is not overcome by the date of the reference applied. Please see MPEP Section 2137 for a better understanding of rejections under 35 U.S.C. 102(f). Applicant's amendment to Claim 1 introduced subject matter that was not disclosed in the Andrews et al. reference. Furthermore, the claims as they are now presented lack subject matter disclosed in the Andrews et al. reference. Therefore, the Examiner has to presume that the contribution by the missing inventors listed in the inventive entity of Andrews et al. is found within the elements missing from the newly presented claims. This is what resulted in the allowance of the above claims.

With regards to the rejections of the claims under 35 U.S.C. 102(b) as being anticipated by either Tomohiro et al. or Kawanaka, Applicant's amendments have overcome these rejections. Therefore, these rejections have been withdrawn and the claims indicated as allowable over the prior art.

5. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach and/or suggest an apparatus for providing an indicator of or from which stiffness can be estimated for logs, comprising, in combination with the other recited elements, a sensing device placed in contact with or in close proximity to a log end to detect at least a part of a frequency spectrum of resonant plane acoustic waves resulting from an induced disturbance that travels the length of the log and reflect at ends thereof, a processing device to derive the indicator from spectral information detected by said sensing device, wherein said processing device derives V^2 as the indicator, where V is the acoustic speed in a relationship $\text{MOE} = \text{density} \times V^2$ by reference to both L (the length) and f_0 , where f_0 is a fundamental frequency of the acoustic spectrum f_1, f_2, \dots, f_n , and where MOE is a dynamic modulus of elasticity, and especially

Art Unit: 2856

wherein f_0 is derived by the processing device using a best fit spectral analysis of the resonant plane frequencies of the at least part detected spectrum f_1, f_2, \dots, f_n .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rose M Miller whose telephone number is 571-272-2199. The examiner can normally be reached on Monday - Friday, 7:30 am to 3:30 pm.
